Making your building perform at its best!

MW/Davis Dumas & Associates

Consulting Engineers

New Space / Renovation:

Whether you are renovating your existing space or building a new building, we can partner with you and assist you to achieve a building design that is energy efficient and works to make your space as productive as possible.

Mechanical Systems Commissioning:

We provide expertise in system operation and energy cost reduction and can provide you with a new system that operates as intended by design or commission your existing mechanical and controls system to operate more efficiently as well as train your facility operations staff how to continue this operation to save on operating expenses and reduce maintenance costs.

Critical Facility Design:

Data Center and Hospital construction projects present many challenges to make sure that your facility operates normally while the project is completed. We are experienced at making this seamless and providing your facility with 100% uptime throughout the entire schedule of construction.
